

With its flagship product **Attribo Cloud Control Center** we have taken one more step towards offering a world class cloud management tool to help you deploy, manage, monitor, auto scale & load balance your cloud resources more efficiently & productively, leaving your team with more flexibility to concentrate on other business priorities. Attribo 3C brings the cloud power to your fingertips while keeping your investments lowest in the industry .

Attribo is built with a unique integration pattern which brings on the multiple cloud vendor API features within **24 Hrs** of their release & made available to you via Attribo 3C management console making you more efficient when it comes to using cloud vendors.

While keeping the technical aspect as minimal as possible we thrive to offer you a best of the breed point & click end user experience which lets you concentrate more on resources & less on "home grown & custom scripts" offered by competition which may lock you in with that tool vendor forever. So in a nutshell your cloud infrastructure is kept intact without any custom re-touching & u'll be able to use your cloud resources as is with no changes even if you decide to stop using Attribo 3C.

Attribo Cloud Control Center (beta)

To enable you to manage the complete cloud resource life cycle **Attribo Cloud Control Center (beta)** has been built from ground up & is the best of the breed cloud management console available in the industry. With its unique, intuitive & feature rich WEB2.0 GUI u'll never want to switch back to your command line tools. Below are few of the salient features those might motivate you to use Cloud Control Center

Managing Deployments

Find & deploy machine images in a breeze, get access to latest & most popular image stack to select from. Create your own favorites catalogue for easy reach & sharing

Multiple Cloud Vendors & accounts

Switch between multiple clouds & accounts with a click of mouse without signing out of the console.

Monitoring & Reporting

Easy monitoring capabilities with build in charting & metric calculation brings out the best & latest data calculations & runtime statistic for you to monitor & evaluate system performance & utilization

User Management & ACL

Adding additional users is a no sweat job. Ask you admin to create an account for you to start using your cloud resources. Set access control levels (ACL) as per the ROLE given to the USER to restrict or grant controlled access to tackle security aspect of your running systems.

Logging

Track the system usage via logging capabilities to monitor you compliance needs. Know who did what & when with a click

Alerts & Notifications

Set alert policies to keep updated about your system health, CPU usage, power thresholds

Usage reports

Know how you & your team is utilizing the cloud resources, plot usage by resource type, user type etc. Get to know money spent on your cloud resources just with a click

Knowledgebase*

Create & maintain your own knowledgebase allowing you an efficient & built-in knowledge sharing experience amongst your users. Spend less time searching for a fix or troubleshooting tip minimizing your SERVER DOWNTIME

Service requests*

Allows build in service request module to allow Self Service & more streamlined resource allocations as needed by a team. Manage your projects efficiently

Security & Data Protection

Your interaction with your cloud vendor & your credentials are well guarded with industry standard Encryption & Secure Communication protocols. We confront to highest measure when it comes to security integration with cloud vendors. So rest assured your cloud resources can be accessed by you & only you.

Automation

Complete non scripting & non custom automation features which keep you less concerned about getting locked in with Attribo & allows better feature utilization exactly as offered by your cloud vendor.
